

Hello to the Hiring Team at Ailoys!

I hope you are all doing well. To make my cover letter easier to read, I have split it into 3 sections. This consists of why I am switching from my company, what strengths I bring to the table, and why I am looking forward to having Ailoys as my next employer.

Most recently, I worked at Morpheus Space, where I co-led the development and stabilization of production software for manufacturing workflows. Due to company-wide budget reductions, my position was recently eliminated, and I am now seeking an opportunity to continue growing as a software developer while contributing to meaningful products.

Below you can find my strengths that fit the role summary:

My Strengths	How does this help Ailoys
Strong Python Backend Foundation	Experience developing backend applications, REST APIs, data processing solutions, and workflow automation systems using Python and Django ORM.
Manufacturing & Production Software Experience	Worked closely with production teams and manufacturing workflows, giving me a practical understanding of how software supports industrial operations.
Linux & Containerized Environments	Experience working in Linux-based environments with Docker, Git/GitLab, and CI/CD workflows.
Fast Learner & Collaborative Mindset	Proven ability to quickly understand complex systems, work with cross-functional teams, and translate business requirements into reliable software solutions.

The opportunity to contribute as a backend developer is something I am good at and aim to work in, and Ailoys provides me the perfect opportunity to deliver measurable improvements in real-world environments. Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and enthusiasm can contribute to your team.

Warm Regards,
Sai Pranavi Kasichainula.
