

Dear Kyla Rushidi,

I hope you are doing well.

I am writing to apply for the Data Engineer position. To make it easier to read, my cover letter is split into three parts, a brief overview of why I am looking for a new position, what my strengths are, and how my skills fit this position.

Most recently, I worked at Morpheus Space, where I co-led the development and stabilization of production software in the aerospace sector. Prior to that, I developed data-driven applications, ETL pipelines, automation solutions, and backend platforms using Python, SQL, and cloud-based technologies. Due to company-wide budget reductions, my position at Morpheus Space was recently eliminated, and I am now seeking an opportunity where I can combine my software engineering background with my passion for data and automation.

Below is a summary of what I bring and how it aligns with your requirements:

| <b>My Strengths</b>                   | <b>How this helps your team</b>                                                                                                                         |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Python &amp; SQL Expertise</b>     | Experience building data-driven applications, backend services, and automation solutions using Python and SQL-based technologies.                       |
| <b>Data Pipelines &amp; ETL</b>       | Designed and implemented ETL pipelines, batch-processing workflows, and data-validation systems to ensure reliable data transformation and quality.     |
| <b>Cross-Functional Collaboration</b> | Comfortable working closely with engineering, product, and business stakeholders to understand requirements and translate them into scalable solutions. |
| <b>Startup Ownership Mindset</b>      | Experience working in fast-paced environments where initiative, adaptability, and end-to-end ownership are essential to success.                        |

Thank you for your time and consideration. I welcome the opportunity to discuss how my background and enthusiasm can directly impact the growth of the company.

Kind regards,  
Sai Pranavi Kasichainula
